

## **Tugas Analisis Algoritma 2**

**Oleh :**

- 1. Annika Laurensia Hipir (2206080050)**
- 2. Adi Juanito Taklal (2206080051)**
- 3. Wildis Eko Y. Nabut (2206080090)**

**PROGRAM STUDI ILMU KOMPUTER  
FAKULTAS SAINS DAN TEKNIK  
UNIVERSITAS NUSA CENDANA**

1. Buat program mencari suku ke-n deret fibonacci dengan metode divide and conquer

Jawab :

Bahasa pemograman : Python

Hasil program:

```
def fibonacci(n:int) -> int:
    if n < 0:
        raise Exception("n tidak boleh negatif")

    if n == 0 or n == 1:
        return 1

    return fibonacci(n - 1) + fibonacci(n - 2)
```

Contoh: n = 18, 19, 25

```
PS D:\Tugas Adi\Analisis Algoritma\Tugas 2> python fibonacci.py
fibonacci(18) = 4181
fibonacci(19) = 6765
fibonacci(25) = 121393
```

2. Buat program menghitung  $a^n$  dengan metode divide and conquer

Jawab :

Bahasa pemograman : Python

Hasil program :

```
def pangkat(a:float, n:int) -> float:
    if n == 0: return 1
    if n == 1: return a

    if n % 2 == 0:
        return pangkat(a, n // 2) * pangkat(a, n // 2)
    else:
        return pangkat(a, n // 2) * pangkat(a, n // 2) * a
```

Contoh: a = 67 n = 5, 6, 7

```
PS D:\Tugas Adi\Analisis Algoritma\Tugas 2> python pangkat.py
power(67, 5) = 1350125107
power(67, 6) = 90458382169
power(67, 7) = 6060711605323
```

3. Perbandingan algoritma perkalian matriks naif dan Strassen

Jawab :

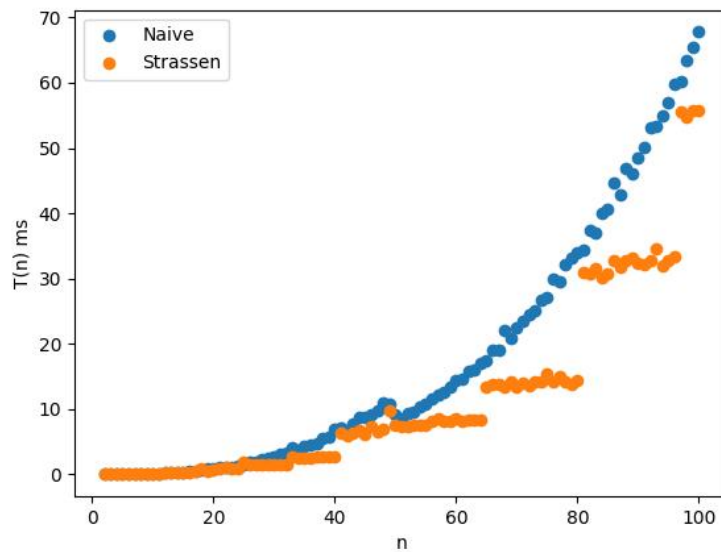

Hasil Perbandingan n=dimensi matriks persegi
